

Gross Domestic Product

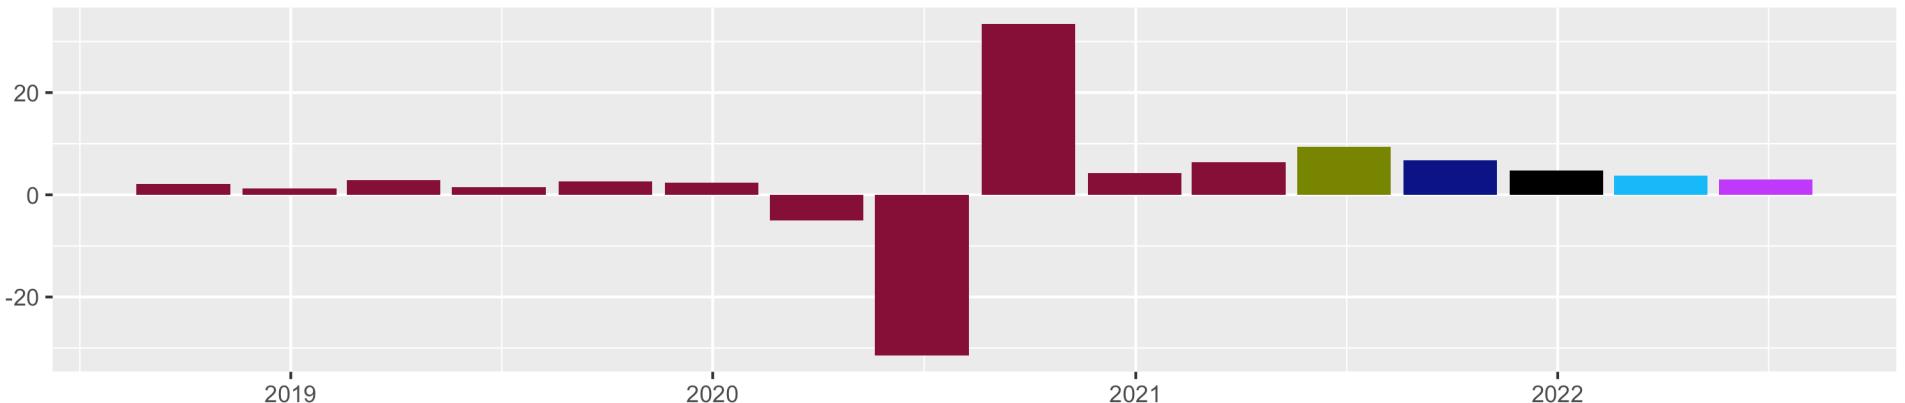

The recovery of the US economy continued into the first quarter of 2021. The economy grew an annualized 6.4 percent, following 33.4 percent and 4.3 percent growth in the third and fourth quarters of 2020. Personal consumption was supported by two rounds of direct transfers to households during the period. Overall consumption increased an annualized 10.7 percent from the prior quarter and is now just shy of the pre-pandemic level. Growth should continue to accelerate as higher immunization levels allow social distancing restrictions to be relaxed and households spend down their significant accumulation of excess savings.

Consumption

As COVID-19 vaccines are widely administered and immunization levels increase, we expect to see a sharp acceleration in personal consumption led by service categories. These categories of consumption, such as spending at restaurants and hotels, were the hardest hit by the pandemic and have had the most difficulty accommodating social distancing requirements. Even though services spending has increased 22 percent from the April low point, it is still nearly 3 percent below the pre-pandemic level. Meanwhile, goods spending has already surpassed pre-pandemic levels.

Labor Market

We expected the April Employment Situation would signal that the economy had entered a new phase in its recovery from the COVID-19 recession. Economists estimated the report would show that one million jobs during the month. However, just 266 thousand jobs were added in April. From a historical perspective, this is an extraordinary number of jobs to add in a single month, but it was a historic miss relative to expectations. Moreover, it was significantly weaker than the gain in March which was revised down to 770 thousand in the April report. We believe that several factors are keeping people from finding employment including the availability of more generous unemployment benefits and issues with child care. Demand for labor remains high, and wages may need to rise until labor supply normalizes.
